Our revolution is evolution

We chose R-32 because.....

 <p>PERFORMANCE</p> <p>R-32 has a low 100-year global warming potential (GWP), a safety classification of A2L, and allows for more capacity by refrigerant volume</p>	 <p>MARKET ACCEPTANCE</p> <p>R-32 has been a commonly used refrigerant internationally since the mid-2010s</p>	 <p>MANUFACTURING EXPERIENCE</p> <p>For more than a decade, Fujitsu General has been distributing R-32 products internationally</p>	 <p>NOT A BLEND</p> <p>Compared to blend refrigerants, R-32 is simpler to manufacture, does not have a temperature glide, can be topped off in gas or liquid phases, and can be easily reclaimed or recycled</p>	 <p>SUPPORT</p> <p>Despite the refrigerant change, what doesn't change is our level of support. We got this!</p>

AIRSTAGE

R 32 is Right for You

R-32 is the world's most used low-GWP refrigerant that already exists and has been tested and proven.

IMPROVED TECHNOLOGY

Optimized Compressor

The compressor has been optimized to meet increased refrigerant and system pressures.

Installed Leak Sensor

The leak sensor will detect if there is a refrigeration leak and send a signal to the mitigation board to turn on the blower.

Mitigation Board

The new mitigation board will turn on the blower to dissipate any refrigerant leak.
